**Increase in pneumococcal bacteraemia in Sweden**

Giesecke, Johan; Fredlund, Hans

Lancet ( GLAN ) , v349 n9053 , p 699-700

Mar 8, 1997

**ISSN:** 0140-6736    **Journal Code:** GLAN

**Document Type:** Feature

**Language:** English    **Record Type:** Fulltext; Abstract

**Word Count:** 632

**Abstract:**

Giesecke and Fredlund indicate that there is evidence of a developing "epidemic" of bacteremic pneumococcal infections in Sweden just like i Norway and the UK, yet there does not seem to be either an increase or decrease among children vaccinated against Hemophilus influenzae type

5529289

Utility

Immunogenic pneumococcal protein and vaccine compositions thereof

Inventor:Koenig, Scott, Rockville, MD

Johnson, Leslie S., Germantown, MD

Adamou, John E., Germantown, MD

Assignee: MedImmune, Inc. (02), Gaithersburg, MD

Examiner: Graser, Jennifer E. (Art Unit: 165)

Combined Principal Attorneys: Olstein, Elliot M.; Grant, Alan J.

	Publication Number	Kind	Date	Application Number	Filing Date
Main Patent	US 6689369	A	20040210	US 2001844124	20010427
Priority				US 2001844124	20010427

Abstract:

The present invention relates to novel immunogenic polypeptides, a therapeutically active fragments thereof, and vaccines, and vaccine compositions, for the prevention and treatment of streptococcal infection, especially by Streptococcus pneumoniae. The invention als relates to antibodies against the disclosed polypeptides, as well as methods of disease prevention and/or treatment.

## Abstract:

A vaccine composition is disclosed that comprises polypeptides and fragments of polypeptides containing histidine triad residues or coiled-coil regions, some of which polypeptides or fragments lie bet 80 and 680 residues in length. Also disclosed are processes for preventing infection caused by S. pneumoniae comprising administerin vaccine compositions.

## Abstract:

The present invention provides bacterial immunogenic agents for administration to humans and non-human animals to stimulate an immun response. It particularly relates to the vaccination of mammalian sp with pneumococcal derived polypeptides that include an alpha helix b exclude a choline binding region as a mechanism for stimulating production of antibodies that protect the vaccine recipient against infection by pathogenic bacterial species. In another aspect the invention provides antibodies against such proteins and protein comp that may be used as diagnostits and/or as protective/treatment agen for pathogenic bacterial species.
